

Victoria Pilato
Building Digital Libraries - Prof. Krichel
LIS654 – plan
February 3, 2012

My digital library will consist of my report cards since nursery school. I am hoping to get contributions from people, hopefully from other locations, to display the differences between how people are graded, including teacher comments, if any. In addition to the images of report cards, there will be information about the contributors leading to the differences between collections.

To begin with, my digital library will contain one collection. Then, as people contribute, more collections will be added, meaning each persons contribution will be its own collection.

Each collection will include one type:

1. Still Image

The metadata for this type will include:

1. Still Image
 - original format information, including size.
 - resolution of the scanned item
 - digital information from photos taken

Dublin Core elements I think will be used so far are:

1. Description = an intro for the collection
2. Title = maybe for school name or collection title
3. Creator = teacher names?
4. Subject = for report card or letter from teacher
5. Type = for the image or text
6. Format = image metadata
7. Language = of the collection

The plug-in I plan to use for Omeka is *contribution*.

Tags can be used to describe locations, bad grades, good grades, and occupation.
